**MM102 APPLICATIONS OF CALCULUS**

Monday, 14 May 2018

14:00 – 16:00 a.m.

Duration: 2 hours

**Attempt ALL questions.**

**Use of a calculator is NOT permitted.**

**Answers will receive credit only if supported by appropriate working.**

1. (a) Evaluate the following integrals

$$(i) \int_{-1}^0 \frac{3x^2 - 3x - 9}{(x-1)^2(x+2)} dx, \quad (ii) \int_1^2 \frac{x^2}{\sqrt{-x^2 + 2x + 3}} dx.$$

**(8, 8 marks)**

(b) Sketch the finite region that is bounded by the curves

$$y = x - x^2, \quad y = 0.$$

Hence find the volume of the solid that is obtained when this region is rotated through  $360^\circ$  about the  $x$ -axis.

**(5 marks)**

**Qu. 2 ON NEXT SHEET**

2. (a) Find  $\frac{dy}{dx}$  and  $\frac{d^2y}{dx^2}$  as functions of the parameter  $t$  when  $x$  and  $y$  are given by

$$x = t^2 + t + 1, \quad y = te^t \quad (t > 0).$$

**(6 marks)**

- (b) A particle moves on the curve

$$3x^2 + y^2 = 21$$

where  $x$  and  $y$  are given in cm. As the particle passes the point where  $x = 2$  cm and  $y = -3$  cm, the  $x$ -coordinate is decreasing at 6 cm/s.

At what rate is the  $y$ -coordinate changing? Is  $y$  increasing or decreasing?

**(4 marks)**

- (c) Consider the function

$$f(x) = \frac{-8x + 10}{x^2 - 1}.$$

- (i) Determine the natural domain of  $f$ .
- (ii) Find all the asymptotes of  $f$ .
- (iii) Find the position and the nature of the stationary points and calculate the values of the function  $f$  at these stationary points.  
Moreover, determine where the function is increasing and where it is decreasing.
- (iv) Find the points of intersection of the graph with the  $x$ -axis and the  $y$ -axis.
- (v) Use this information to sketch the graph of  $f$ .  
Draw the asymptotes and label the stationary point(s) and points of intersection with the axes.

**(1, 3, 7, 1, 2 marks)**

**Qu. 3 ON NEXT SHEET**

3. (a) Express the complex number

$$\frac{\left[ 2 \operatorname{cis}\left(\frac{2\pi}{3}\right) \right]^8}{\left[ \sqrt{2} \operatorname{cis}\left(\frac{\pi}{6}\right) \right]^{15}}$$

in the form  $a + ib$ , where  $a, b \in \mathbb{R}$ .

**(4 marks)**

- (b) Use de Moivre's Theorem to find constants  $a, b$  and  $c$  such that

$$\cos^3(\theta) \sin^2(\theta) = a \cos(5\theta) + b \cos(3\theta) + c \cos(\theta).$$

**(6 marks)**

- (c) Express the cubic polynomial  $P(z) = z^3 - 6z^2 + z + 34$  as the product of three linear factors.

**(4 marks)**

- (d) Find all solutions of  $e^{2z} = -1 - \sqrt{3}i$ .

(Express your answer in the form  $a + ib$ , where  $a, b \in \mathbb{R}$ .)

**(2 marks)**

**Qu. 4 ON NEXT SHEET**

4. (a) Consider the first order, linear differential equation

$$x \frac{dy}{dx} + 4y = \frac{\sqrt{1+x}}{x^3},$$

where  $x > 0$ .

- (i) What is the integrating factor for the differential equation?  
(ii) Find the General Solution of the differential equation.  
(Express your solution  $y$  explicitly as a function of  $x$ .)

**(2, 3 marks)**

- (b) Find the Particular Solution of the differential equation

$$\frac{dy}{dx} = \frac{y^4 + x^4}{xy^3} \quad (\text{where } x, y > 0)$$

which satisfies  $y(1) = 2$ .

(Express your solution  $y$  explicitly as a function of  $x$ .)

**(7 marks)**

- (c) Find the General Solution of the second order, linear differential equation

$$\frac{d^2y}{dx^2} - 2\frac{dy}{dx} - 3y = -8e^{-x} + 6x.$$

**(7 marks)**

**Total number of marks: 80**

**END OF PAPER**

**(ML/GMcK)**
